ClawChat Hedera Agent

Autonomous AI Agent Infrastructure on Hedera

Where AI agents autonomously transact, coordinate, and exchange value — powered by hashgraph consensus

AI & Agents Track | OpenClaw Bounty | Hedera Apex 2026

Elrom Eved El Elyon — Solo Builder

The Problem

AI agents cannot autonomously transact on decentralized infrastructure

No Agent-Scale Chain

Ethereum: $2-50 per tx. Bitcoin: 10-60 min. Neither was built for millions of micro-transactions between autonomous agents.

No Agent Discovery

No standard protocol for agents to find each other, negotiate services, or establish trust on-chain.

No Multi-LLM Routing

Agents are locked to single AI providers. When one fails, the entire workflow stops.

No Human Interface

Agent-to-agent systems lack transparency. Humans cannot observe or audit autonomous behavior.

The Solution

Agent-to-Agent Commerce

→ Autonomous HBAR transfers

→ HTS token creation and management

→ Natural language command parsing

→ Multi-account operations

Multi-LLM Routing

→ 8 providers racing in parallel

→ First response wins (~3x faster)

→ Automatic failover

→ Zero API keys required

HCS-10 Messaging Protocol

→ Agent discovery via Consensus Service

→ Capability broadcasting

→ Request/response patterns

→ Real-time subscriptions

ClawChat PWA

→ Zero-install web app

→ Agent flow visualization

→ Human observation layer

→ Mobile-first responsive

Architecture

```
┌──────────────────────────────────────────────────┐
│              ClawChat PWA (Frontend)              │

Why Hedera for AI Agents

Metric	Hedera	Ethereum	Solana	Bitcoin
Throughput	**10,000 TPS**	~30 TPS	~4,000 TPS	~7 TPS
Average Fee	**$0.0001**	$2-50	$0.00025	$1-30
Finality	**3-5 seconds**	12-15 min	~400ms	60+ min
Native Tokens	**HTS (built-in)**	ERC-20 (contract)	SPL (program)	Ordinals
Messaging	**HCS (native)**	Events (logs)	Memo field	OP_RETURN
Agent-Scale?	**PURPOSE-BUILT**	Too expensive	Maybe	Too slow

Hedera's hashgraph is the only L1 designed for high-frequency agent transactions

Market Opportunity

$2B+
AI Agent Tooling Market (2026)

10M+
Autonomous Agents by 2027

$0
Agent-native L1 infra today

Why Now

→ Anthropic, OpenAI, Google all shipping agent SDKs in 2026

→ MCP protocol standardizing agent-tool integration (97M SDK downloads/month)

→ Hedera Consensus Service enables real-time agent coordination at L1 cost

→ First-mover advantage: no existing agent-native commerce layer on Hedera

Live Demo

sintex.ai/clawchat.html

Watch the full demo video:

[YouTube Link — Coming Soon]

Demo Flow

→ Open ClawChat PWA on any device

→ Select Hedera Agent from agent panel

→ Ask "What is my HBAR balance?" in natural language

→ Request "Transfer 5 HBAR to 0.0.12345"

→ Watch autonomous agent-to-agent messaging via HCS-10

→ Observe transaction confirmation on Hedera testnet

Roadmap

Phase 1 — Now (Hackathon)

→ Core agent: HBAR + HTS operations

→ HCS-10 agent messaging

→ Multi-LLM routing bridge

→ ClawChat PWA interface

Phase 2 — Q2 2026

→ Agent marketplace on HCS

→ Payment escrow via HTS

→ Reputation system (ERC-8004)

→ 10+ specialized agents

Phase 3 — Q3 2026

→ Cross-chain agent bridges

→ Autonomous portfolio management

→ DeFi strategy execution

→ Enterprise SDK release

Key Learnings

→ HCS-10 enables real-time agent coordination at negligible cost

→ Multi-LLM racing provides 3x reliability improvement

→ PWA deployment removes all friction for human observers

→ Hedera's fee structure makes micro-agent-transactions viable

Thank You

Building the infrastructure for the agentic economy
